

Hardware as a Service

Hardware as a Service (HaaS), is a procurement process similar to licensing. We remotely monitor and administer hardware on your site for an affordable subscription fee. One can also have onsite HaaS service on monthly basis to avoid any hardware loss. The HaaS model is developed to alleviate financial strain, in which the vendor allows customers to license the hardware directly.

Under HaaS, we offer remote IT monitoring and proactive management services as well as hardware procurement and replacement, expenses that ideally should fit into a fixed monthly subscription rate to save customers money and time.
